

CIS241

System-Level Programming and Utilities

History

Erik Fredericks, frederer@gvsu.edu

Fall 2025

Based on material provided by Erin Carrier, Austin Ferguson, and Katherine Bowers

How do you *remember* what you did?

How do you *remember* what you did?

Method #1 - manually record with a script

Usage:

- `script <optional filename>`
- Records inputs and outputs, can be viewed later
- Use `exit` to stop recording

A question!

- When would this be useful?

How do you *remember* what you did?

How do you *remember* what you did?

Method #2 - look at your command history

- Maybe scroll up if you have an interactive terminal
- Or use the up/down arrow keys to show recent commands
- Or better yet, use the `history` command
 - Usage: `history <optional number of lines>`
 - Better usage: `history | grep <what you want to find>`
